

What is claimed is:

1 1. A data storage network, said network comprising:

2 a portable data storage device, said portable data storage device storing data, said
3 data being a first type of data, said data storage device being incapable of processing said
4 data; and

5 a purpose optimized device, said purpose optimized device being optimized to
6 perform a specific task, said specific task being processing said data of said first type, said
7 purpose optimized device being wirelessly connected to said portable storage device to
8 perform said specific processing task.

1 2. The data storage network of claim 1 wherein said portable data storage device also
2 stores data of a second type and wherein said purpose optimized device is incapable of
3 processing data of said first type.

1 3. The data storage network of claim 2 wherein said data storage network further
2 comprises a second purpose optimized device, said second purpose optimized device
3 being optimized to perform a second specific task, said second specific task being
4 processing said data of said second type.
